Dictionary

This dictionary has been prepared for users to get to know the

Blockchain technology, is experiencing rapid development in the world. Creative economy startups raise $5 billion in 2021. More than 50 million independent content creators fueling this new trend, With the curator and community builder, this generation of micro-entrepreneurs is currently estimated to be worth $20 billion. **It could grow to a market of $104.2 billion by 2022.**

GainX, It is an ecosystem blockchain platform that enables everyone to access digital finance management tools with maximum privacy principles..

$GainX, It is a platform currency that allows time, the most valuable object of human life, to be used more quickly, relaxing and accelerating human life.

$GainXGold GainX It is a financial instrument that has all the features of the Token but is equivalent to Gold. GainxGold holders are the gold holders of the free world.

GainXer, Joining the world of Gain X are their nicknames.

Stake, It means that GainX lovers keep their Tokens and earn income in return,
Burn, It is the vaporization of GainX by burning from excessive love.

Crowdfunding, realizing their projects, entrepreneurs, with real people from a large number of people, each of whom is small or large.

Creative Economy Influencers, artists, musicians, actors, athletes, models, content creators and thought leaders make up the estimated $100+ billion economy, referred to as the "Creative Economy."

Summary and Web 3.0

Smarter

Web 1.0 was established as a reading environment with single-stream data; web 2.0 was founded as a data platform for everyone. It is now known that web 3.0 is a technologically advanced Internet where the user executes and machines use thought.

What is Web 3.0 ?

It is a third generation technology network. Today, we are in the transition period from Web 2.0 to Web 3.0. The third generation network will not only bring the changes in front-end development, it will also create the back-end change. Web 3.0 is much bigger and better. It aims not only to be smart, but also to be self-sufficient and provide seamless network management.

How Does Web 3.0 Work?

It is difficult to understand the working logic of Web 3.0 without sufficient examples
For example: If you want to shop, you can filter your search. This means that search engines will only select certain words. This will be more complex and advanced searching.
In the case of Web 3.0, as soon as you type on the phone, the search engine will identify the search category you are looking for. Based on your previous searches and the topic you are interested in, the search engine will show you more relevant searches. In this case, the phone would be the search word.
In web 2.0, if two people sit next to each other and provide the same search query, the search results are completely similar. However, with web 3.0, if two people sit next to each other and provide the same search query, the results may be different..
This means that even if you belong to the same geographic location, search results will be affected by several other parameters.

+63%

Blockchain technology is growing rapidly, but the majority of executives (63%) still do not know what Blockchain is or why it is so important.

Problems

All our habits have changed in a short time. The digital world, where all data is digitized and all physical objects and ideas exist, must provide solutions to people's important problems.

Transfer Challenges

The aim of GainX will be to bring the habit of crypto money to the daily life of people first through the business and international trade sector. Today, since the sector in which money transfers take place the most is international trade, commercial and material activities in this sector are banks, etc. It is slowed down too much by the audits carried out by third partiesWith the .GainX ecosystem, global trade will be paved, and all transactions will be carried out much faster and more securely.

Network Insufficient

Today, since the sector in which money transfers take place the most is international trade, commercial and material activities in this sector are banks, etc. It is slowed down too much by audits by third parties. With the GainX ecosystem, global trade will be paved, and all transactions will be carried out much faster and more securely.

Security

Today, forms of investment depend on a third party. They kept our money in safes and became partners in trade, and in the system they created, they became the center of trade. Since third institutions were included in the trades, transactions became more difficult, and class differences between geographies and races emerged. GainX adopts decentralized consensus mechanism between blockchain technology and registered users for valuable investments, transparent and reliable without the need for a central authority.

Fragile Economy

The current payment and investment methods lose their validity over time and will continue to do so. To fully understand the revolutionary place of GainX in the new digital landscape, it is important to first understand the critical role financial institutions and currencies play. Transactions such as creating power imbalances, monitoring all money transfers of the society were carried out by central banks, providing tight control over the masses and benefiting from the obligation of individuals to be tied to the central bank.

Entrance

Gainx Ecosystem

The Gainx Ecosystem makes it as simple as managing the entire network in one room.

The payment and investment methods that have been used until today are valid over time.It is losing and will continue to lose.
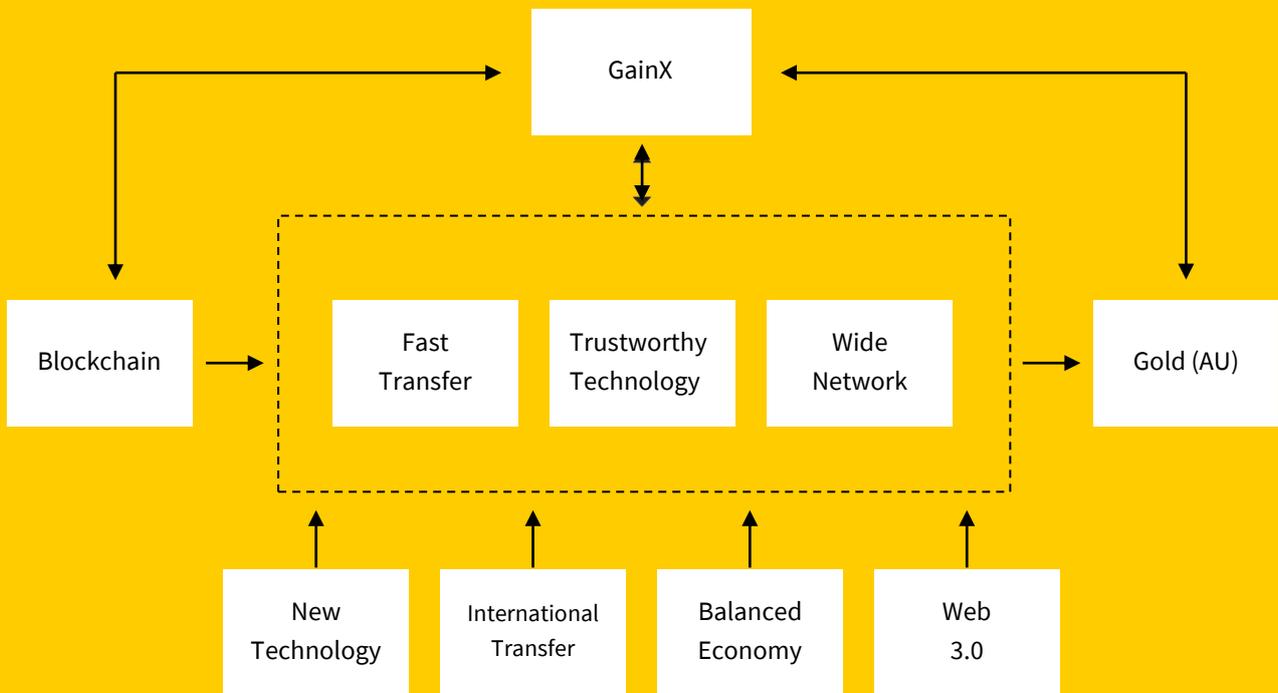

Traditional, trust-based, centralized payment and investment methods depend on and rely on a third institution/person.

These institutions kept an AU (gold) coin, which was invented in the 7th century BC and called money, and the dyed papers, which have come in a changed and diversified form, in safes and became partners in trade, or in the system they created, they became the center of trade. As third institutions were involved in trade, transactions became more difficult, and class differences between geographies and races emerged.

It had to be more than trusting, it had to be transparent. GainX, blockchain
a central authority among registered users and It adopts the decentralized consensus mechanism in a transparent and reliable way, investing its valuable assets without the need for individuals. GainX for everyone meet the aspirations of the public with the vision of being easily accessible, usable and valuable was created for.

Apart from being an investment money, GainX will lead business life, human life, nature, technology, education, health, environmental order, global economy and world peace.
To fully understand GainX's revolutionary place in the new digital landscape,
first understand the critical role financial institutions and currencies play
is important. Creating power imbalances, monitoring all money transfers of society Transactions such as
It provides control and saves individuals from having to depend on the central bank.
was taking advantage.

📊

+10.2%

According to the data, about 10.2% of the global population using the internet owns some type of cryptocurrency.

Today, we are at the birth of a new monetary system synthesized with an electronic system. This formation started with Bitcoin and continued with other innovations. Although blockchain technology was discovered in 2008, it has not yet been integrated into people's daily lives. People use cryptocurrencies just to make money by trading on the stock market.

The aim of GainX will be to bring the habit of crypto money to the daily life of people first through the business and international trade sector. Today, since the sector in which money transfers take place the most is international trade, commercial and material activities in this sector are banks, etc. It is slowed down too much by the audits carried out by third parties. With the GainX ecosystem, global trade will be paved, and all transactions will be carried out much faster and more securely.

Why Blockchain

Basically, the blockchain is a list of transactions that anyone can view and verify.

A blockchain is a growing list of records, called blocks, that are securely linked together using cryptography

In 2019, it was estimated that around $2.9 billion were invested in blockchain technology, which represents an 89% increase from the year prior. Additionally, the International Data Corp has estimated that corporate investment into blockchain technology will reach $12.4 billion by 2022

Blockchain
What ?

A blockchain is a growing list of records, called blocks, that are securely linked together using cryptography.Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data (generally represented as a Merkle tree, where data nodes are represented by leafs). The timestamp proves that the transaction data existed when the block was published to get into its hash. As blocks each contain information about the block previous to it, they form a chain, with each additional block reinforcing the ones before it. Therefore, blockchains are resistant to modification of their data because once recorded, the data in any given block cannot be altered retroactively without altering all subsequent blocks.

Uses Area

- Cryptocurrencies.
- Smart contracts.
- Financial services
- Games
- Supply Chain
- Domain Names

The crypto blockchain is not maintained by any individual or entity, including banks and governments.

Performance Efficiency

Cost Optimization

Almost all cryptocurrencies, including Bitcoin, Ethereum, Bitcoin Cash, and Litecoin, are protected by blockchain networks. This means that their accuracy is constantly verified by a huge amount of computing power.

The list of transactions found on the blockchain is the basis of most cryptocurrencies. Due to the cryptographic nature of these networks, payments made through the blockchain can be more secure than standard debit/credit card transactions. For example, you do not need to provide sensitive information when making a Bitcoin payment. This means that the risk of your financial information being compromised or your identity stolen is virtually zero.

- • **It is global**, meaning that cryptocurrency can be sent quickly and cheaply all over the planet
- • **Increases privacy:** Cryptocurrency payments do not require you to include your personal information, which protects you from hacking or identity theft.
- • • **is transparent**: Since every transaction in cryptocurrency networks is publicly broadcast on the blockchain, everyone

The first decentralized blockchain was conceptualized by a person (or group of people) known as Satoshi Nakamoto in 2008. Nakamoto improved the design in an important way using a Hashcash-like method to timestamp blocks without requiring them to be signed by a trusted party and introducing a difficulty parameter to stabilize the rate at which blocks are added to the chain

Decentralization

By storing data across its peer-to-peer network, the blockchain eliminates a number of risks that come with data being held centrally.

- • Almost all cryptocurrencies including Bitcoin, Ethereum, Litecoin are protected by blockchain networks.
- • The list of transactions found on the blockchain is the basis of most cryptocurrencies.
- • Payments made via blockchain can be more secure than standard debit/credit card transactions.

Market Overview

Cryptocurrencies are decentralized digital currencies.

Launched in 2008, Bitcoin was the first cryptocurrency and is still the biggest, most influential, and best-known cryptocurrency. In the decade since then, other cryptocurrencies such as Bitcoin and Ethereum have offered a digital alternative to money printed by governments.

Market Overview ($m)
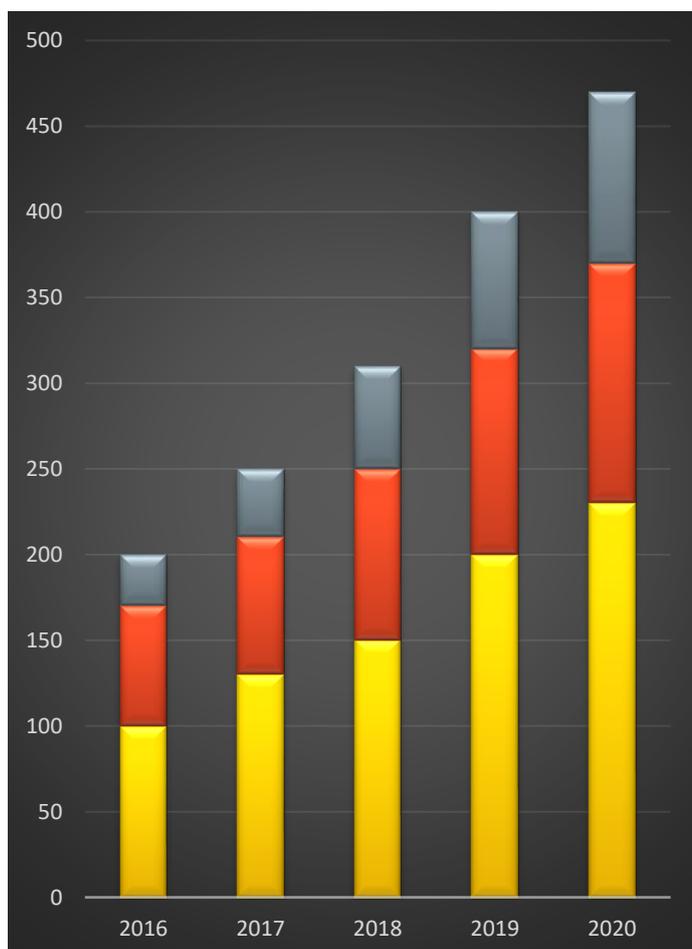

The global cryptocurrency market size was valued at $1.49 billion in 2020, and is projected to reach $4.94 billion by 2030, growing at a CAGR of 12.8% from 2021 to 2030.

Key Market Trends

The market capitalization of cryptocurrencies over the years shows how high the price volatility of the market is.

The estimated cryptocurrency market capitalization, for example, during the month of January 2018, varied between 400 billion USD and 800 billion USD which was at 566 billion USD at the beginning of the year 2018 and finally settled at 128 billion USD by the end of the year 2018. In terms of transaction volumes, bitcoin alone had the highest number of 200,000 average daily transactions.

Answers

GainX is a market leader and universal coin. unit is intended.

GainX is a platform built on blockchain technology designed to meet the aspirations of the public with the vision of being easily accessible, usable and valuable for everyone.

Security

By taking its place in the world of cryptocurrencies, you can quickly access your money anywhere and anytime and aims to provide reliable

Strong Infrastructure

GainX adopts decentralized memorandum of understanding between registered users through blockchain technology, without the need for a central authority, to reliably invest their valuable assets.

Exchange

GainX is on the way to become a digital commerce tool that will accelerate the transfer traffic and create a safer, easier, transparent world by bringing currencies such as dollars and euros, which have been invented by humanity from past to present, to human life.

+57.5%

When we look at Bitcoin prices on a yearly basis, it has added 57.50 percent to its investor.

Transparency

Bitcoin, Ethereum, transactions on their networks are broadcast publicly without distinction. This means that it cannot determine the money supply without affecting the transactions.

Undo

Cryptocurrency payments are non-refundable. It reduces the possibility of fraud for sellers. For customers, it makes shopping more affordable by eliminating one of the main arguments for credit card companies' high transaction fees.

Portability

Since your crypto investments are not tied to institutions, you can use them anywhere, regardless of where you are and what happens to the main intermediaries of the global system.
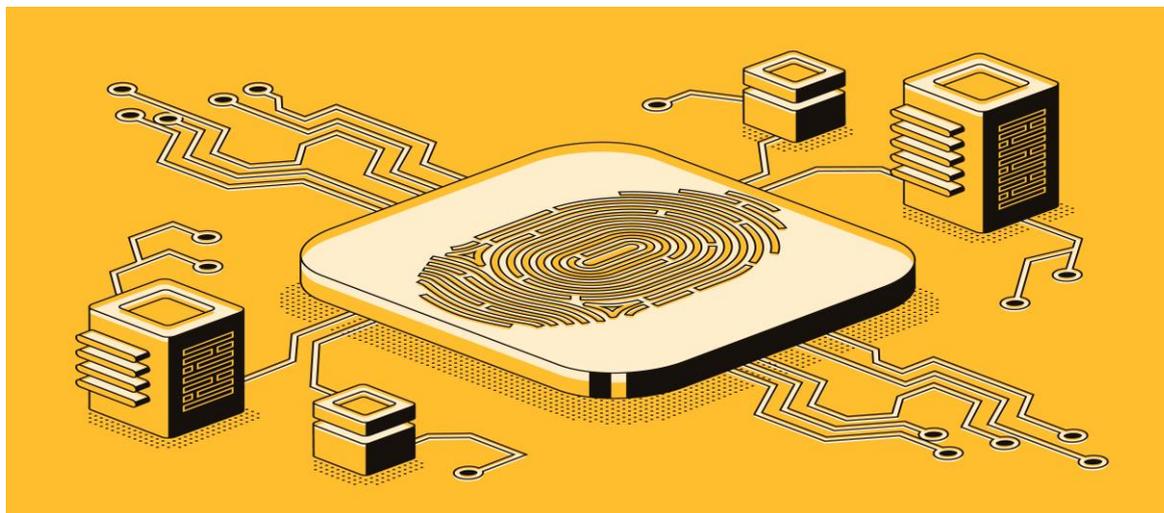

Who we are?

GainX Ecosystem

GainX is not only an investment money, but also for business, human life, nature, technology, education, health, environmental order, global economy and the world peace will be led.

GainXGold

Gold indexed stable token

GainX Gold provides the opportunity to invest even with balances under 1 USD. To expand the trading area, GainX Gold is set at 2 decimals.

GainX Gold uses an arbitrage strategy that follows the global Gold market prices and plays the role of market maker in executing the necessary transactions to avoid any price difference between the spot gold market and GainX Gold.

What is Gainx Gold (GainXG)?

GainX Gold (GainXG) is a gold-backed cryptocurrency that will be released in 2022 Q4 by the creators of Gainx. GainXGold, a Coin running on its own blockchain, can be traded on the best exchanges and aims to make it easy for anyone to invest in gold.

The main purpose behind GainX Gold is to make gold more convenient as the physical commodity is not easily divisible or flexible in terms of shipping.

GainX Gold allows traders to purchase small amounts of gold indefinitely via cryptocurrency so they can trade 24/7 without being stuck with limits and commissions.

The GainX Gold equivalent will be held at the Bank through Harrison Holdings LLC.

Crowdfunding
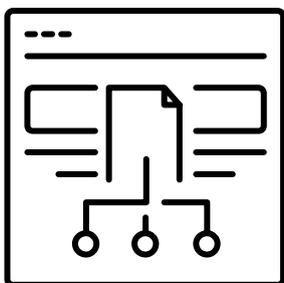

Investments from around the world are seeing crowdfunding as an alternative to the usual risks. To date, crowdfunding investments have received $34 billion in support. But traditional solutions have problems, and blockchain can solve them.

GainX is advancing towards the goal of being a fast and reliable trade transfer money for users. Basically, GainX provides support to users' national trades to fund projects.
.
Built on blockchain technology, GainX adopts a decentralized consensus mechanism to transparently and reliably invest valuable assets among registered users without the need for a central authority and individuals.

Payment Solutions

GainX

GainX

Business
Model

Before entering the market, GAINX will make 2 pre-sales, one private and the other public.
The first pre-sale will be held with a price tag of 0.90$ and 20% amount, specially for long-term investors who will buy a large amount.

Burn

decrease in the money supply

The coin burning process is a continuous process in the coin ecosystem.

This process is done with the aim of reducing the total supply in the market by permanently deleting a certain amount of crypto money from the market.

With this process, the amount of GainX in the market is reduced, allowing prices to decrease continuously over a certain period of time. As the amount of GainX in the market decreases, the current GainX value is theoretically expected to increase in the long run.

A GainX burning event occurs as follows:

- A GainX investor requests a burn, stating that he wishes to burn some GainX.

- The contract then verifies whether this investor has GainX in their wallet and that the requested amount of GainX is valid.

- If the person does not have enough GainX or the requested amount is not valid (for example, 0 or -5), the burning process will not take place.

- If enough GainX is available, the GainXs are deducted from the wallet. Then the total amount of GainX is updated and GainX is burned.

- If you initiate the burning process to burn your GainX, that GainX will be destroyed permanently. It is not possible to recover these GainX once burned.

Stake

Staking is a way to earn rewards for storing GainX.

You can earn rewards over time by staking some of your GainX. This often happens through a transaction that resembles an interest-bearing deposit account.

Staking advantages?

Stakake provides the advantage of contributing to the security and efficiency of the GainX project.
By staking some of your GainX, you make the blockchain more resilient to attacks and strengthen the chain's transaction processing capability.

GAINX STAKE
20% for 365 Days
10% for 180 Days
7% for 90 Days

The Staking app is for people who believe in the goals of GainX Coin and want to become investors in the long run.
Purchases made during the Special Pre-Sale phase will optionally be staked for 180 days or 365 days, guaranteeing 10% GainX earnings for those who choose 180 days and 20% for those who choose 365 days.
Users who want to skate with GainX Coins during the public pre-sale phase will receive Gainx Earnings at the end of the process.
After the GainX coin is listed on the exchange, the stake rate is fixed at 5%, and stakes can be made for a minimum of 60 days.

Events

GainX : Innovative trading coin

GainX Enterprise is a trading coin that solves market needs with innovative leaders and technologists rather than the structure of the blockchain.

Blockchain Event will hold meetings and events between technologists and developers with blockchain businesses and concerts and GainX lovers with the support of GainX
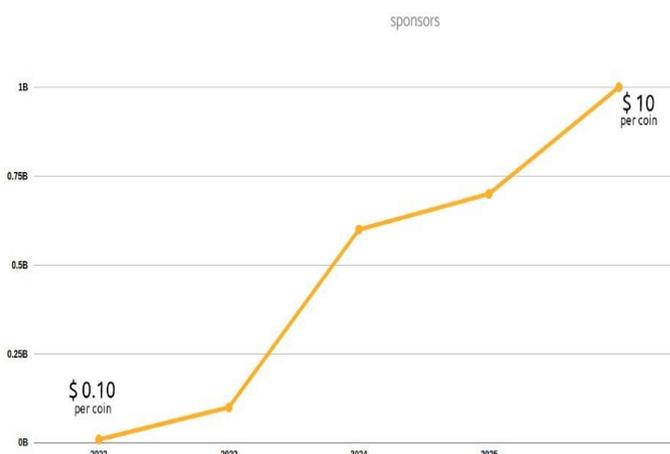

GainX events, music festivals. Versatile events, GainX Conferences, music conferences with GainX Fest

GainX will bring together GainX lovers, industry leaders, investors and GainX enthusiasts for GainX discussions, Q&A, presentations, open source content and more.

GainX

GainX, which is the basis of trade that provides the development and change of humanity from the past to the present, is the digital trade that will accelerate the transfer traffic and the formation of a safer, easy, transparent, consistent, modern and rich world by removing the currencies such as dollars, euros and pounds, which are invented by people, from the safes and brought to human lifeIt was built on being an intermediary and aims to be the leader of the digital currency industry.

SYMBOL:	GAINX
Total Supply:	2.000.000.000 GAINX
Private Pre-Sale:	200.000.000 GAINX / 0,09$ (Min. 25K USDT)
Pre-Sale:	300.000.000 GAINX / 0.10$
Soft Cap:	$243M
Hard Cap:	$810M
Pre-Sale Period:	1.06.2022- 30.06.2022
Supported Units:	USDT, BTC
Listing Date:	01.09.2022

Before entering the market, GAINX will make 2 pre-sales, one private and the other public.
The first pre-sale will be held in 10%, with a price tag of $0.09, specially for long-term investors who will buy in large quantities.

The second pre-sale will be open to everyone with a price tag of $ 0.10 and 15%, and everyone will be able to buy any amount of USDT, BTC they want.
GAINX will use the funding and equity it received in the pre-sale to strengthen its volume and market value.

As a result of these studies, it is aimed to be listed on major stock exchanges, to increase the price steadily and to acquire investors from all over the world.

5% of GAINX, AirDrop etc. reserved for Reward/Event. It will be used in campaigns to increase brand value.
GAINX, which is 15% Out of Supply, will be used to keep the price stable and prevent whale movements.
GAINX coins that will be sold as a result of the 10% private pre-sale are for investment purposes and will remain locked for 365 days after the expiry of the private sale date.
Users who buy GAINX from the public pre-sale can lock their GAINX and perform staking if they wish.

Presale – Sale - ICO

GainX is a technological force.

The GainX money market consists of a team that strives to attract new investors with the introduction of new projects. This team launches new cryptocurrencies with its own technology infrastructure.

## Way to Win

Presale → ICO → SALE → WİN
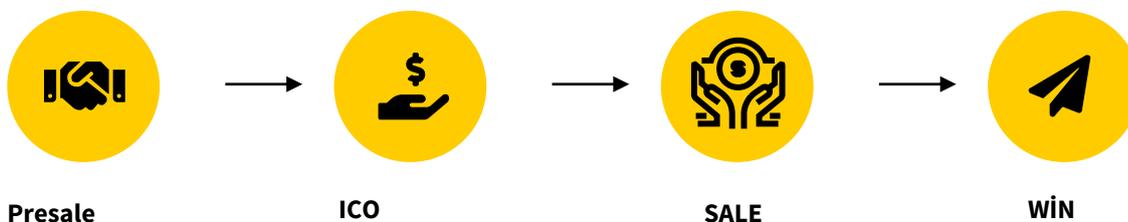

Presale

Pre-ICO or presale is the token sale event that blockchain-based platforms run before the official crowdsale or ICO campaign goes live. Presale allows investors to buy tokens before the official crowdsale begins

ICO

An ICO is a method of raising funds by offering a fixed amount of new money to investors.
Cryptocurrencies (tokens) minted via one-time or expedited issuance. source of money
Collected during the ICO is used by the team for project development and
application

AirDrop

In the AirDrop campaign, which is planned to be launched during the ICO Process, users will be able to earn GainX free of charge if they fulfill the specified conditions.

Airdrop in cryptocurrencies is a marketing strategy that involves sending free coins or coins to wallet addresses to promote a new cryptocurrency. A small amount of the new virtual currency is sent to users' wallets for free in exchange for a small service like retweeting a mail sent by the cryptocurrency company, and is purely promotional.
In the cryptocurrency world, airdrop refers to a procedure in which a blockchain project distributes free coins or coins to the wallets of active members of the blockchain community. Airdrops are often promoted on the company's website and on cryptocurrency forums.
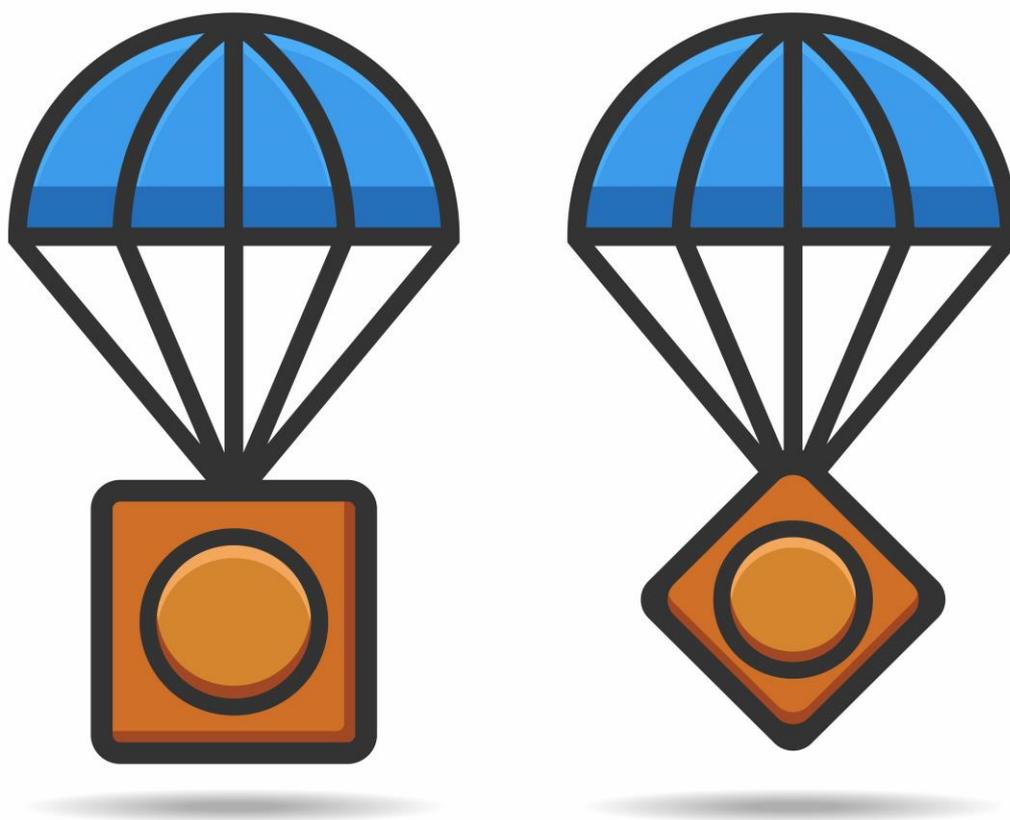

The Team

Management Team

GainX Ecosystem will form its own team with its volunteers and all its management will be anonymized.
The voting and monitoring system established by the startup team is designed as a structure that active Gainx members will take over in the future.

Customer service

Gainx is a platform that cares about user satisfaction. We offer the support service, e-mail support and social media channels that can be accessed from the website and application platforms for the solution of any problems and answers to the questions experienced by each user who joins the Gainx family. We continue our software development, taking into account the opinions and suggestions shared by Gainx users with our team.
